

CONTENTS

Review Analysis

Distributed Multi-Agent System for Real-Time Traffic Optimization: A Comparative Analysis of Advanced Greedy Heuristics in Urban Congestion Management	01-10
A Dual-Stage Chinese Instruction Jailbreaking Framework for Generative Large Language Models	11-20
Research on Embedded Integration of Robot Power System and Control Module: A Disinfection Robot Control System Based on an ARM Controller	21-31
Precision Optimization and Path Planning of Industrial Robots Based on Force-Position Cooperative Control in Incremental Metal Forming	32-41
Research on Trajectory Decision-Making Methods for Intelligent Robots Integrating LiDAR and Multimodal Perception such as Image	42-52
Super Resolution Reconstruction of Bidirectional Feature Flow Images Based on SRGAN	53-60

Application Demonstration

Knowledge Supply Chain Furnace: AI Cross-Modal Extraction Training Method for Business Administration Case Generation	61-70
Method for Identifying Spatial Heterogeneity of Natural Disasters from the Perspective of Geographic Causal Reasoning	71-85
Tailoring Multimodal AIGC to Time-Honored Brands: A Stable Diffusion-Based Framework for Visual Generation and Evaluation	86-99
Pathways and Practices for AI-Powered Digital Archives and Intelligent Services	100-110
Community Security with Low-Cost AI Cameras: Scenario-Based Applications and Trends in Edge Computing and Lightweight Models	111-120
Embodied Intelligent Mobile Operation Robots For Industrial Scenarios	121-130

Frontier Prospects

Research on Visual Narrative Strategies for Big Health Communication: Based on the Health Belief Model	131-141
A Study on the Enhancement of Philosophical Literacy Driven by Generative AI: Taking the Cultivation of Dialectical Thinking in Marxist Philosophy Courses as a Starting Point	142-150
Building High-Quality Expert Database Datasets: Guangdong's Practices in Leading AI Empowerment and the Development of a Unified National Market	151-157
